

Coin Sorter

SCAN COIN SORTOVIT

YOUR WORLD COUNTS

The SCAN COIN SORTOVIT coin sorter has been developed to speed up your coin processing without in any way sacrificing the highest level of accuracy. As standard it sorts up to 2,500 coins per minute in two currencies in up to 17 denominations.

- ▶ Fast change sorting track
- ▶ Highest accuracy in counting, sorting and batching
- ▶ Speed up your coin processing
- ▶ Off-sorting counterfeit, foreign and damaged coins

Speed Up Your Coin Processing

Do you need to speed up your coin processing while keeping it totally accurate? With this machine you get the highest possible accuracy in counting, sorting and batching. You can even off-sort counterfeit, foreign and damaged coins accurately and in record time. No time-wasting, no extra energy, no extra expense required. Total efficiency. And it is easy to operate.

Accuracy in action

Apart from being a fast worker, the SCAN COIN SORTOVIT is renowned for having the highest possible accuracy in counting, sorting and batching. It is also exceptionally accurate for off-sorting counterfeit, foreign and damaged coins.

Quickrail®

SCAN COIN SORTOVIT is equipped with Quickrail® – a fast-change sorting track. It can be changed in next to no time and minimum maintenance is required.

Desktop efficiency

The SCAN COIN SORTOVIT is designed for desktop use. There is no need for space-consuming stands or special furniture. Just place it where it suits you best and from day one the SCAN COIN SORTOVIT is a convenient working partner

Flexible choices

There is one serial port allowing the machine to send count data to a serial printer or to communicate with a variety of external systems including direct data transfer to PC networks and central accounting systems.

Easy operation

The machine is easily operated from a clear and logical display – designed to perfectly suit the needs of the operator. It has a large coin tray with high capacity. An automatic coin feed and a cover reducing noise and dust are other examples of classic ergonomics.

Multi-Stop Capacity

The sorter features multi-stop capacity, meaning that several denominations can be packed into bags or tubes in one step, eliminating unnecessary stops for packing after the coins has been sorted. The amount of each batch can be defined and preprogrammed to match the needs of all users.

The solution could also be equipped with a wide range of Coin lifts for feeding the coins into the sorter in a continuous and efficient way.

Specification

Width	1,008 mm / 39.7"
Depth	367 mm / 14.4", 413 mm/16.3" incl. outlets
Height	306 mm / 12.0"
Weight	57 kg / 125.6 lb
Voltage	230 V/50 Hz, 115 V/60 Hz
Power	Approx. 200 VA
Speed	Up to 2,500 coins /min.
Diameter	16.1-31.0 mm (standard) Special diameters on request
